SUMMARY

GenAI/LLM developer experienced in building RAG pipelines and agentic tool-calling workflows with LangChain and LangGraph, backed by strong Python/FastAPI backend engineering and DSA fundamentals.

EDUCATION

Harcourt Butler Technical University, Kanpur

Bachelor of Technology in Electronics Engineering

CGPA: 7.78

(2023 – 2027)

TECHNICAL SKILLS

- **Languages:** Python, C++, SQL
- **GenAI / LLM Engineering:** LLMs, RAG, LangChain, LangGraph, Prompt Engineering, Embeddings, Groq API, Hugging Face Transformers
- **Skills:** Data Structures & Algorithms, Machine Learning (Supervised/Unsupervised Learning, Regression, Classification, Neural Networks, Gradient Descent), MySQL
- **CS Fundamentals:** OOPs, DBMS, Operating Systems, Computer Networks
- **Tools:** REST APIs, FastAPI, Pydantic, Node.js, FAISS, Linux, VS Code, Git, GitHub, Streamlit, Vercel, Render

PROJECTS

LangGraph RAG Chatbot | Python, LangGraph, LangChain, Groq, FAISS, Streamlit

[GitHub](#) | [Live](#)

- Built a chatbot that answers questions from a PDF document (up to 100MB) by loading it with PyPDFLoader, splitting it into 1000-character chunks with 200-character overlap, and converting each chunk into embeddings using a Hugging Face sentence-transformer model.
- Stored the embeddings in a FAISS vector database and built a retriever that pulls the top 4 most relevant chunks for each user query using similarity search.
- Wrote a custom retrieval tool using LangChain's `@tool` decorator and bound it to a Groq-hosted LLM (`gpt-oss-120b`), so the model can call the tool on its own whenever a question needs information from the PDF.
- Used LangGraph to build the chatbot's flow as a state graph: a chat node calls the LLM, and conditional routing (`tools_condition`) decides whether to call the retrieval tool or respond directly, looping back until the answer is ready.
- Chose Streamlit to quickly build and deploy an interactive chat UI – with file uploads, streaming, and chat history.

Letshire - AI Assistant | Python, FastAPI, React, Groq LLM API, Pydantic

[GitHub](#) | [Live](#)

- Built an AI recruiter assistant to solve the problem of recruiters not having time to read every resume – parsing PDFs into a structured, Pydantic-validated JSON profile so recruiters can ask questions and get answers grounded in the actual resume.
- Optimized LLM usage by parsing each resume once at startup instead of per conversation, reducing unnecessary calls to the Groq LLM API.
- Built REST APIs with FastAPI to serve resume data and handle recruiter queries, connected to a React (Vite) frontend with persistent conversation history.
- Deployed the backend on Render and the frontend on Vercel, making the full app publicly accessible.

EXPERIENCE

NIVARO Health Technologies Pvt. Ltd.

Software Development Engineer Intern

[Certificate](#)

July 2026

- Developed responsive frontend interfaces and integrated them with backend APIs, including Firebase Authentication, Firestore, and Cloud Storage, for a healthcare platform.
- Tested and debugged application modules to catch and fix issues before release, contributing to overall app stability and UI/UX improvements.
- Collaborated with the development team using Git and GitHub across feature development, database design, and deployment workflows, following modular, clean-code practices.

ACHIEVEMENTS

- Ranked **2nd in the university round of Smart India Hackathon 2025** for developing a web-based portal for the PM Internship Scheme. [Certificate](#)
- Solved **400+ algorithmic problems** across LeetCode and Codeforces, reflecting strong Data Structures & Algorithms fundamentals [Codolio](#)
- Achieved a maximum **LeetCode rating of 1439** and **Codeforces rating of 816**.

CERTIFICATIONS

- **Machine Learning Specialization** – DeepLearning.AI & Stanford University (Coursera)
- **System Design Masterclass** – Udemy
